

On or after the week of July 8, Cascade Natural Gas and its contractors, with EPA oversight, will collect samples on the beach north of the old Bremerton Gasworks. This is being done to determine whether manufactured gas plant waste from the old gasworks is still present on the beach. We expect the work will take two to three days to complete.

The work will take place during daylight hours. This sampling effort is part of the ongoing study of the Bremerton Gasworks Superfund site. It will help EPA better characterize the contamination present to help us develop possible future cleanup options.
